DETAILED ACTION

1. Claims 1-10 are presented for examination
2. Applicant's submission of references on form PTO-1449, paper no. 4, has been considered. A signed copy of the form is attached.

Specification

3. The disclosure is objected to because of the following informalities:

The disclosure is replete with grammatical and idiomatic errors and inconsistencies. Applicant is advised to review the disclosure, as well as the claims, and make necessary corrections

Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. Claims 1, 7, and 8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - The limitations "a tool and cutting conditions **etc.** of a tool" as stated in claims 1, 7, and 8 and "with workpiece material, **etc.**" as claimed in claim 1 do not satisfy the requirements for the metes and bounds of what the subject matter of the instant claim encompasses.
 - Claims 7 and 8 are both recited as independent claims, but then a limitation for a "tool path data generator" or "tool path generation apparatus", respectively, are listed as being claimed by one of the previous claims as though claim 7 is multiply dependent and/or 8 is a dependent claim. It is not clear whether Applicant intends for claims 7 and 8 to be independent or dependent.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-10 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Suzuki (US Patent No. 5,428,715).

The patented invention to Suzuki discloses a data generator device for a numerically controlled machine tool. The invention provides a figure data generator device with projects figures for easy setting and display. This type of device allows for efficient and accurate generation of data to be collected and stored for machining. The patented device includes a figure data generator much like the "feature data extractor" of the instant invention. Applicant's "tool/cutting data storage" is referred to as the "view data memory" in the patented reference. Suzuki employs a figure data setter for setting the optimal cutting method just as the "cutting method setting unit" of the instant invention. The figure data generator of the reference of prior art establishes correspondence on the basis of the cutting method much like the "tool path data generator" in the instant claims does. The data generator device as patented by Suzuki teaches and discloses an automatic tool path data generation apparatus, which alleviates the need for operator input. See column 4, figures 1, 4, 6, and 11, in particular.

For the reasons stated above, the limitations of the claimed invention is taught by the prior arts of record; thereby, rendering the instant claims unpatentable.
